

CAUSTIC DISSOLVER PLANT

EASY TO INSTALL:

The system comes complete and is basically a “Mechano” set, in that everything is pre built and assembled in our workshop, checked, dismantled and packed ready for delivery. On site it is merely a bolt together task. All it needs is a water supply in and a piping system out.

SYSTEM INCLUDES:

- ◆ 5000Lt, 316 Stainless steel blending tank fitted with 380V mixer to suite. The tank comes complete with adjustable feet, sight glass, temp. gauges and loading hatch with screen to suite.
- ◆ 2x Stainless steel mixing and transfer pumps, skid mounted. 1x on-line, 1x standby. These pumps are primarily used to transfer caustic lye to the day tanks on the washers but they also aid the blending process and can also double as mixing pump, should there be an unlikely fault with the agitator.
- ◆ Safety shower.
- ◆ Stainless steel hose assembly.
- ◆ CIP facility.
- ◆ Main electrical control panel.
- ◆ Fully galvanized loading platform for operator.
- ◆ DVD training video as well as detailed instruction manual plus mixing matrix.

EXCLUSIONS AND OPTIONAL EXTRAS:

- ◆ Caustic Holding Tank.
- ◆ Roofing Structure.
- ◆ Pipe work in and pipe work out.

IDEAL FOR ALL MAKES OF BOTTLE WASHERS !!!
